17-0006 RFP for the Design and Installation of Playground Structures for the City of Sioux Falls

1. At Kuehn Park, on the North side around the existing play equipment, are you wanting new curbing in this location even though it already has existing concrete curbing there? Are you wanting any curbing between the existing playground and the new playground?

There will need to be curbing around the entire structure we are replacing. On the North end, the curbing will need to be extended to the west if the structure being replaced does not take up the same area.

2. Since the City is responsible for the removal of the equipment and excavation can I assume that they will be creating the route into the sites that we are to use for the installation also? Then if we are going to be using the access routes created by the city, who will be responsible for repairs to the grounds?

The City's site access impact will be minimal and the contractor will be responsible for the access route they use. If needed, the City can review this with the successful bidder prior to their entry into the site.
