

## Pedestrian Advisory Committee

January 23, 2020 3:00 p.m.  
City Center

Introductions: Ryan Groeneweg, Leah Bernard, Greg Boris, Charles Santee, Sam Trebilcock, Wes Phillips, Mike Gray, Clint Brown, Jaron DeWit, Koni Sims, Jeff Schmitt

Last time we discussed priorities. I grouped them, along with the survey results and existing documents into a matrix. We then reviewed the five main categories.

- Priorities
  - Roadway Design
  - Crosswalks
  - Public Education
  - Connectors / Linkages
  - Streetscaping

Proposing to review each category in detail. Which will give a comprehensive understanding in order to then work on specific projects – either for stakeholders area of interest, redevelopment areas, or new construction projects.

They can also be used to develop and update the Pedestrian Plan.

- Input into plan considerations
  - Safety
  - Accessibility
  - Facilities
  - Connections
  - Maintenance
  - Design
  - Education

Focusing on Roadway Design; the aspects that we want to detail are:

- Lane widths, number of lanes, right of way
- Corner curb radi, crosswalks,
- Sidewalks, sidepaths
- Calming, speed limits, parking lane lines
- Trees, (limbs and heaving) maintenance, sidewalk snow & leaves,
- Medians
- Lighting, stop lights

- Therefore, the plan and future meetings should address with these issues / priorities through steps, guides, actions, policies AND follow up with implementation, measurable, enforcement, regulation

Additional comments:

Connie – need to make the visuals ADA accessible

Greg – Long Range Transportation Plan; guiding principals

Charles – sidewalk vs. walkways

Boulevards vs. parking strips

Next Meeting: February 27, 3:00 p.m. City Center
